Technical report

The idea was born of the bench looking at the name of the company that created this contest. After careful observation of the poster and the logo, it has accepted that the project for this bench was hiding in the name "**dibiase marmi**" and the geometric shape of the brand. The bench design is simple and at the same time practical. The same bench can be used in many environments, both inside and outside, can be made with any type of marble that the company sees fit to use. In my case I prefer to use **white Carrara marble or portoro** used for the bench while inside, the benches meant for the outside I chose coreno pearl. Each of these materials makes it very special. To give an extra touch to the bench and to take advantage of the technology which has the company, I thought that the pancha can be engraved: the writing, the logo, a crest and more. This incision must be filled with resin or fluorescent resin in the case where the marble is of a light color. The bench is composed, for obvious reasons of processing, 6 pieces integral with each other and polished.
